Professional Summary

Backend engineer with 7+ years building and scaling production systems, currently leading backend development on a lead-bidding and campaign analytics platform that handles 60–70K leads a day. Core stack is Ruby on Rails, PostgreSQL and Redshift, with experience across API design, query performance, background processing, real-time integrations and AWS. Also builds in Python and Go, including a retrieval-augmented generation (RAG) service and an OCPP charging gateway, and has mentored junior engineers.

Skills

- **Languages:** Ruby, Python, Go, JavaScript, SQL
- **Frameworks:** Ruby on Rails, FastAPI, Sidekiq
- **Data:** PostgreSQL (incl. pgvector), Redshift, Redis
- **APIs:** REST, GraphQL, WebSockets, server-sent events
- **Infrastructure:** AWS (Lambda, Fargate, SQS), Docker, CI/CD with GitHub Actions
- **Observability:** Datadog, Sentry, Airbrake
- **AI tools:** Claude Code, Codex, Cursor

Work History

Sr. Associate Lead - L3, Iksha Labs (Remote) | 03/2026 - Current

- Lead backend development on SmartHub, a lead-bidding and campaign analytics platform for a US insurance marketplace handling 60–70K leads per day, and set the code conventions (thin controllers, service and query objects, no model callbacks) for a four-engineer backend team.
- Designed and built a real-time revenue sync from ad-portal-api to the company ERP across four brands, pushing each receipt seconds after commit at peak rates of 30–36 receipts per minute. An idempotent delivery ledger, Sidekiq retries with backoff and a scheduled sweeper that finds and re-sends missed receipts mean an ERP outage never blocks billing.
- Moved heavy reporting queries from the primary Postgres database to Amazon Redshift, cutting dashboard and report load times from 1.2s to 600ms.
- Built the reporting layer for admin and client users: dashboards, campaign analysis, saved views, and scheduled reports delivered by email and SFTP.
- Building the backend for a procurement and production-management platform (pre-production), structured as a modular Rails monolith with separate admin, vendor portal, procurement and production-line modules.
- Use Claude Code in day-to-day development for implementation, tests and code review, checking and correcting its output before merge.

Software Development Engineer, Coffeebeans (Remote) | 10/2024 - 01/2026

- Built and maintained web applications for a major US home insurance seller, focusing on marketing data flows from end-user to sales/product teams.

- Developed microservices for processing large CSV premium quote files, leveraging AWS Lambda and Fargate for scalable computation.
- Launched an MVP service for reselling business leads and replaced in-house ETL with a SaaS solution (Segment).
- Improved backend and frontend event tracking, enhancing analytics and business insights.

Backend Engineer, GrowthTribe (Remote) | 10/2022 - 08/2024

- Development of new features and maintenance of existing ones in the Ruby on Rails application (uses Postgres as DB, exposes Graphql APIs for frontend).
- Demonstrated expertise in job scheduling using Sidekiq and optimizing PostgreSQL queries for enhanced performance. Also worked on improving test suite speed.
- Successfully implemented subscription model using Stripe, contributing to the business's revenue growth and operational efficiency
- Assisted junior developers in their career growth through mentorship, sharing knowledge on best practices for backend engineering tasks.

Ruby on Rails Developer, Rently (Kolkata) | 09/2020 - 09/2022

- Planning and conceptualizing. System design and architecture. eg: data sync between micro services, efficient communication between IOT devices using serverless architecture.
- Improving performance and scaling ROR apps. eg: Bulk SQS parallel processing, Optimized Sidekiq unique jobs, SQL query optimizations, Gem upgrades, Rails upgrade from v3 to v6.
- Improved test suite speed which brought down runtime from 2 hours to 30 minutes

Full Stack Engineer, Kreeti Technologies (Kolkata) | 07/2019 - 08/2020

- Integrated DocuSign API for e-signing documents.
- Optimized web applications for speed, scalability and security.

Education

Bachelor of Technology: Computer Science and Programming, 06/2019
Government College of Engineering, Berhampore

Languages

English: Bilingual or Proficient (C2)
